

Environmental policy

Lohmann & Rauscher is a leading international supplier of first-class medical and Hygiene products.

The environmental policy of Lohmann & Rauscher was decided on by the management and principles or areas where action is to be taken regarding environmental protection have been defined by environmental policy. Furthermore, the obligation to continually improve matters of environmental protection and compliance with environmental requirements, have been communicated both internally and externally.

L&R is committed to sustainable corporate development and to the realization of social responsibility: economic, social, ecological, ethical and cultural.

L&R bases its activities on the defined global UN Sustainable Development Goals of the 2030 Agenda, the SDGs (Sustainable Development Goals).

Our clear commitment to protecting the environment is an important guideline for our business activities. We follow our long-standing tradition and long-term improvement of our competitiveness.

For us ecological, sustainable action already starts at the product development level, reaches into manufacture and delivery and finishes up with the application and disposal of our products.

In all areas of the company we respect to resource-conserving processes and production, we use environmentally-friendly materials and engage in environmental and energy-saving logistics.

In defined areas, we actively assume our responsibility through systematic optimization. This is done by involving all employees and by working together with customers, suppliers and service providers.

Environmental policy includes the obligation to fulfil the tasks and follow the laws and regulations relating to environmental protection.

Environmental policy is a very important part of Lohmann & Rauscher's company philosophy, and is reviewed for suitability in the event of major changes within the companies' orientation, it is then updated if considered necessary by the management.

Lohmann and Rauscher 'live' active communication internally and externally.

Thomas Menitz
Executive Vice President Production & COO
